

Derma Prene® IsoTouch® HydraSoft®

INNOVATION TO REDUCE SKIN IRRITATION AND IMPROVE SKIN CONDITION:

The **Derma Prene® IsoTouch® HydraSoft®** synthetic polyisoprene, powder-free surgical glove is designed as a micro-thin moisturizing glove that prevents Type I latex allergic reactions and restores and improves hands. This glove combines proprietary skin moisturizing technology with the most advanced latex-free synthetic material to restore hand condition without risk of Type I allergic reactions. It is ideal for delicate procedures in ophthalmic, micro, and cardiovascular surgery without the risks associated with natural rubber latex sensitization. The **Derma Prene® IsoTouch® HydraSoft®** can also serve as an underglove as its micro-thickness allows for comfortable double-gloving. It offers exceptional dexterity, tactile sensitivity and at the same time, outstanding strength and barrier protection.

Safety & Protection

Infection Control

Viral Penetration. Although not required by the FDA, Ansell's premium line of surgical gloves is tested to ensure protection against viral permeation. **Derma Prene® IsoTouch® HydraSoft®** has been tested and passed the viral penetration according to ASTM F1671 and F1670.

Cuff Roll-Down. This glove features Ansell's patent-pending **SureFit Technology™**. **SureFit Technology™** provides surgeons, nurses and other healthcare professionals with superior protection during operating room procedures.

Bone Cement. As long as the standard preparation and use directions for bone cement are followed, this glove provides a protective barrier for handling mixed bone-cement product.

Skin Protection

Does not contain natural rubber latex. Made of 100% synthetic polyisoprene and is safe for latex-sensitive (Type I) healthcare professionals and patients.

Moisturizing

Uses Ansell's **HydraSoft Technology®** which actively restores moisture and rehydrates the skin during use.

Comfort & Fit

Donning

Alcohol Resistant. Ansell's proprietary polyurethane inner coating will not break down during normal use. It is resistant to alcohol-based hand disinfectants.

Damp-Hand Donnability. Enhanced polymer coating allows easy dry and damp-hand donning.

Double Donnability. Micro-thickness allows for easy and comfortable double-gloving.

Hand Fatigue

Shape of Glove/Former. Produced on new, ergonomically-designed formers to enhance fit and comfort, and to reduce hand fatigue and stress.

Stretchability (Modulus). Because this glove is made from non-latex polyisoprene, wearers experience a more secure fit that provides greater comfort without bagginess.

Tactile Sensitivity

Dependability. Due to its micro-thickness, this glove is recommended for surgical procedures requiring a high level of tactile sensitivity.

Grip

Application Driven. Anti-slip smooth finish prevents slippage.
