

Derma Prene® IsoTouch® Orthopaedic

Derma Prene® IsoTouch® Orthopaedic is based on the perfect combination of latex-free synthetic polyisoprene material and ergonomically designed formers to provide enhanced fit and comfort, without the risk of latex sensitization. Ultra-thick to withstand the rigors of high-risk, trauma and reconstructive procedures. This glove is pale green in color for instant identification as a natural rubber latex-free product, which helps to reduce confusion and risk to both healthcare workers and patients with Type I latex allergies.

Safety & Protection

Infection Control

Viral Penetration. Although not required by the FDA, Ansell's premium line of surgical gloves is tested to ensure protection against viral permeation. Derma Prene® IsoTouch® Orthopaedic has been tested and passed the viral penetration according to ASTM F1671 and F1670.

Cuff Roll-Down. This glove features Ansell's patent-pending SureFit Technology™, which provides surgeons, nurses and other healthcare professionals with superior protection during operating room procedures.

Bone Cement. As long as the preparation and use directions on the bone cement are followed, this glove provides a protective barrier for handling mixed bone-cement product.

Skin Protection

Does not contain natural rubber latex. Made of 100% synthetic polyisoprene and is safe for latex-sensitive (Type I) healthcare professionals and patients.

Thickness

Derma Prene® IsoTouch® Orthopaedic gloves are over 40% thicker than our standard polyisoprene synthetic gloves. They are recommended when extra protection and puncture resistance is needed.

Comfort & Fit

Donning

Alcohol Resistant. Ansell's proprietary polyurethane inner coating will not break down during normal use. It is resistant to alcohol-based hand disinfectants.

Damp-Hand Donnability. Enhanced polymer coating allows easy dry and damp-hand donning.

Double Donnability. Design and thickness allow for easy and comfortable double-gloving.

Hand Fatigue

Shape of Glove/Former. Produced on new, ergonomically-designed formers to enhance fit and comfort, and to reduce hand fatigue and stress.

Stretchability (Modulus). Because this glove is made from non-latex polyisoprene, wearers experience a more secure fit that provides greater comfort without bagginess.

Tactile Sensitivity

Dependability. The synthetic polyisoprene material delivers all the performance characteristics of natural rubber latex without the risk of latex sensitization. The extra thickness of these gloves is optimized for the best balance of protection and tactile sensitivity, all while allowing for comfortable fit during the surgical procedure.

Grip

Application Driven. Anti-slip smooth finish allows for worry-free instrument and suture handling as well as in situations where you need to apply extra pressure.
